

NERVES

Nerve = a specialized bundle of nerve cells that can transmit electrical (+ and - ions) signals.

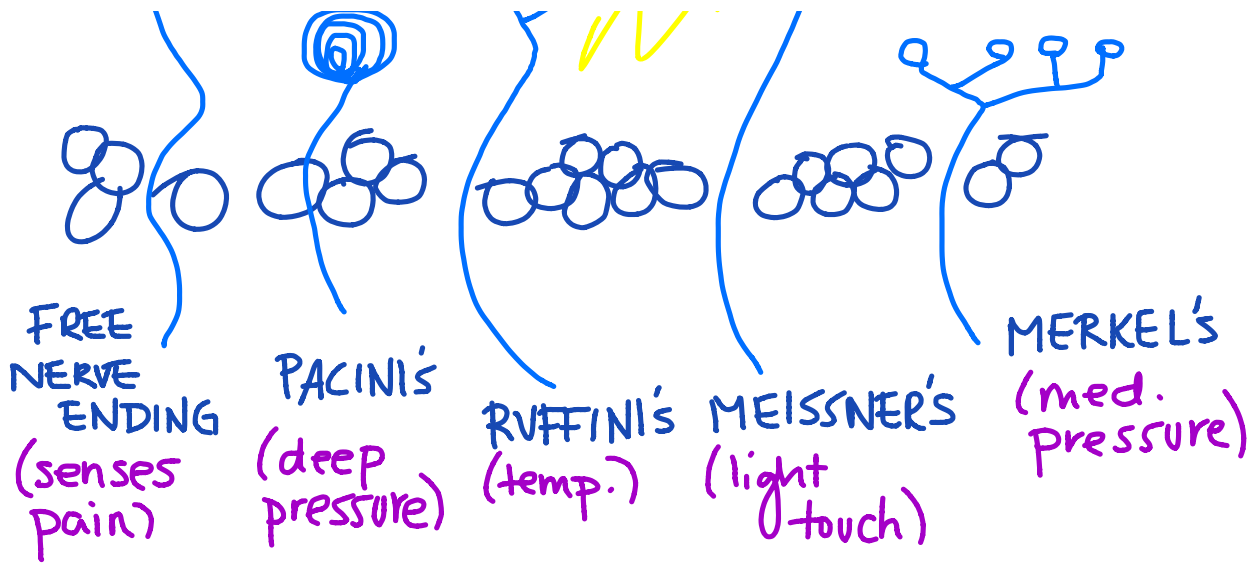

Neuron = one nerve cell.

Nerve Endings

Different types SENSE different things in our environment (sensing = sending information about the world to the brain).

CORPUSCLE = "tiny body/blob" → nerve endings

★★ The closer the nerve endings are to each other, (high concentration),
 → the more SENSITIVE that area of the skin is.
